# Computer programming E140

Christian Dudel

September 4, 2024

# What will be covered in this course?

- Software: R (and RStudio)
- Mostly basic things in these programs
- Course will not cover many things
- Course will not be deep

# Goals

At the end of this course...

- ...you understand basic concepts of R
- ...you can do a basic analysis in R

# Prerequisites

- Basic demographic knowledge (e.g., you know what a ‘rate’ is)
- Basic statistical knowledge (e.g., you know what a ‘mean’ is)
- First experince using statistical software (Stata, Excel, SAS, SPSS, R, . . . )

# Already an expert?

- Write a function that takes any integer as input and returns TRUE if the integer is a prime number, otherwise it returns FALSE
- Write a function that takes any integer as input and returns its amicable number if it exists, otherwise it returns FALSE
- Check one of the many tasks on rosettacode.org solved with R
- Reproduce or replicate one of the many reproducible/replicable articles available at Demographic Research
- Work on your own analysis

# Materials

Materials will be available from GitHub, also mirrored on OSF:

- https://github.com/christiandudel/EDSD2024
- https://osf.io/p6rh8/

# Contact

- Email: dudel@demogr.mpg.de
- Office: 359 (3rd floor, east wing)
- Website: http://www.christiandudel.com

# Things I work on/I am interested in

- *Topics*: Labor markets, fertility, health
- *Concepts*: Stratification, inequality, life courses, aging
- *Methods*: Longitudinal data analysis, causal inference, identification, survey methodology

# Course schedule

September 4 (Wed), 09:30-11:30, Introduction and basics

September 4 (Wed), 13:30-15:30, Descriptive statistics

September 5 (Thu), 14:00-15:00, Tutorial

September 6 (Fri), 09:30-11:30, Data visualization

September 6 (Fri), 13:30-15:30, Data handling

September 9 (Mon), 09:30-11:30, Programming (1)

September 11 (Wed), 13:30-15:30, Programming (2)

September 12 (Thu), 14:00-15:00, Tutorial

September 13 (Fri), 09:30-11:30, Programming (3)

October 18 (Fri), 09:30-11:30, Example

# Types of session

- Regular session (7)
- Tutorial session (2)
- Final example session (1)

# Regular sessions

- I show things
- You bring your laptop and follow
- Always possible to ask questions!

# Tutorial sessions

- You solve exercises
- I am there to help
- Exercises and solutions are available online (GitHub/OSF)
- Voluntary
- Has to be distinguished from the (mandatory!) assignment

# Final example session

- Real application
- Several options
  - Birth register data (fertility rates etc.)
  - Agent-based simulation (Schelling's segregation model)
  - COVID-19 fatality
- Open for suggestions!

# Assignment: Overview

- One mandatory assignment
- Assignment handed out on September 13
- Deadline: October 20
- Assignment will consist of several tasks

# Assignment: Your solutions

- You submit R code as solutions (via email)
- R code should be commented, explaining what is happening
- Code should work without errors

# Assignment: Deadline

- Deadline assignment: October 20, 12am/midnight/24:00 (CEST/Berlin time)
- Send your solutions to me (dudel@demogr.mpg.de)
- You will get a confirmation (might take a bit, sorry)
- I might get back to you if I have problems with your file(s)
- It is your responsibility that your files are working!

# Assignment: Groups

- You can work in groups
- Actually, I strongly suggest you work in groups!
- Please not more than five people per group
- Please submit your solutions only once per group
- Make clear who is member of the group when submitting

# Assignment: Grading

- You can either “pass” or “fail”
- Your code should. . .
- . . . work without errors
- . . . be well-documented: Comments!
- . . . should be (somewhat) efficient. If one step can do the work then don’t use two or more!

# Assignment: Summary

- One assignment consisting of coding tasks
- You submit code as solutions, via email
- Deadline: October 20
- You can work in groups
- Pass/fail

# Other dates

September 26 (Thu), 13:00-17:00: Social Demography Recruitment Day (prelim. title)

# What is R?

- R is an open source statistical programming language
- First release in 1995
- Used for data analysis and statistical programming

# Why use R?

- Free, open source
- Can easily be extended
- More than 21,000 packages available on CRAN
- Many methods are already implemented in R
- Commonly used in both science and industry
- Many R-related materials: Books, journals, conferences, forums, tutorials...

# Why use RStudio?

- R is the programming language
- RStudio is a tool to use R more efficiently (IDE)
- Features:
- Syntax highlighting, code folding
- Project management (e.g., GitHub)
- Markdown support
- ...

# Disclaimer

- R is not the only statistical software and it is fine if you prefer something else
- RStudio is not the only IDE/editor for R (ESS, RKWward, Tinn-R, ...)
- R can be used in many different ways
- Example: base R vs tidyverse vs data.table vs specialized packages
- I do things in certain ways, and this course will follow that
- This does not mean that the solutions from this course are the only or the best way to do things

# What do you need to get started?

- R: https://cloud.r-project.org/
- R-Studio: https://www.rstudio.com/
